

## Placement Rate Methodology

The Mississippi Department of Career and Technical Education requires the institution to report the students' job placement rate for twelve months following the end of the school year in which the students completed their program. The placement rate includes the percentage of completers who have found employment in a profession related to the completer's program or career cluster. It also includes program completers who are continuing their education at another institution or have entered the military. It does not include program completers employed in a job not related to the program or career cluster, students who are unemployed but seeking employment, students not in the labor force, or students whose status is unknown.
